Meets the second Thursday night in each month. Visiting brethren cordially invited. B. E. Clarkson, W. M., J. D. Britton, Secretary.

## JOIN A CO-OPERATIVE BULL ASSOCIATION

Best Way to Rapidly Develop Fine Milk Cows.

Clemson College, May 9.—The purpose of bull associations is to bring about the rapid development of productive milk cows of good conformation. This is accomplished principally by the joint purchase, ownership, use, exchange, and sale of good purebred dairy bulls. A recent census report shows 203,000 milk cows in South Carolina. Most of these cows are not kept in dairies, but are used on farms and in villages to furnish the family milk supply. Not more than one-half of one per cent are purebreds. The majority of these milk cows do not carry enough dairy blood to give them a tendency to produce milk profitably; therefore the families owning such cows are without milk, except for a few months after their cows freshen. By introducing the blood of highly developed dairy cows through their sons the calves from our present milk cows may become handsomely profitable cows.

The Organization. A bull association consists of three or more communities owning at least three high class bulls. Each community is known as a block of this association. The number of members in each block will depend on the number of cows owned. Since each block should consist of 30 to 60 cows owned within one and one-half to two miles of the community center, one man owning 40 cows might form a block alone, while the next community might have 20 members owning a total of 50 cows. The association is managed by a board of directors consisting of one member selected from each block to serve one year. This board of directors manages and controls all the business and the association, makes proper arrangement of the blocks, selects, purchases, and sells the bulls of the association, fixes the rate of compensation for bull service, arranges for keepers and their compensation, and for the care and handling of bulls.

## How to Organize an Association.

The success of a co-operative bull association depends largely on the care used in its organization. Before an organization is attempted, the farmers interested should obtain as much information as possible regarding the plan of operation. This information can be secured from the county agricultural agent or from the Extension Service of Clemson College. Active work by the county agricultural agent is necessary in order to perfect a bull association, since it takes the time of some one very much interested to see the members of the communities and get them together in a county organization.

After those interested have been informed as to the plans the county agent should call a meeting in each community suitable for a block. At this meeting the plan of operation of the bull association should be gone over and explained by the county agent, a dairy specialist, or a member of an association already in operation. Those present desiring to become members should sign an agreement somewhat like the following:

"We, the undersigned farmers of \_\_\_\_\_ county, realizing the need of more profitable dairy cows and the importance of purebred dairy bulls of good breeding, hereby agree to become members of the proposed co-operative bull association, provided that satisfactory constitution and by-laws can be drawn up and adopted, and that a block can be formed within reach of our farms."

At this community meeting a delegate or director should be elected to attend the county meeting at which a constitution and by-laws are drawn up and directors elected. This county meeting is held after all the communities interested have held their local meetings. The assessment for purchasing the bulls is levied by the directors equally on each block. This assessment may be apportioned to the members of the blocks in either of two ways. If there is a rather thick cow population among the members, the assessment may be made on each cow subscribed. If the members have only a few cows each, the assessment may be made on the "share" basis, each member taking an equal amount of stock. For example, suppose \$300.00 bulls are to be purchased. If there are ten members owning 30 cows in one block, the assessment on "per cow" basis would be \$10.00 for each cow subscribed. On the "share" basis, it would take \$30.00 worth of stock for each member in that block.

By using these high class bulls one after another the farmers can rapidly develop fine milk cows. The calves from the first bull used will carry 50 per cent improved blood. When they in turn are bred to the next bull, their calves will carry 75 per cent improved blood. The next cross carries 87 per cent and the next cross 96 per cent improved blood.

## Some Advantages of Bull Associations.

1. Better and fewer bulls at less cost.
2. Opportunity for line breeding by purchasing bulls suitably bred to breed to one another's daughters.
3. The exchange of bulls every two years, by means of which continued use of the bulls can be had until their value as breeders is proved.
4. The introduction of purebred cows.
5. The establishment of one breed in a county.

## ROBS OTHER BIRDS OF PREY

"Frigate Pelican" Secures Its Food Chiefly by Forcing Its Weaker Brethren to Disgorge.

The frigate bird, also called the man-of-war hawk and the "frigate pelican," is a sea bird, so called from its attacks on other birds. This bird, very large and with black plumage, is capable of very powerful and rapid flight. It sometimes measures ten feet from tip to tip of its extended wings. On account of its immense extent of wing and its dashing habits, it has been called the swiftest bird that sweeps the seas.

The frigate bird is a tropical sea bird of two species. The larger ranges all round the world within the tropics; the smaller is found only near the eastern seas from Madagascar to Moluccas and southward to Australia. Both species breed in large colonies, building their nests on rocks, high cliffs or lofty trees on uninhabited islands. The birds often fly far out to sea, but most of the time they remain near shore.

The frigate bird's aerial evolutions are extremely graceful and it soars to great heights. It is said never to dive for its prey, but to seize fishes only when they appear at the surface or above it. Flying fishes form a great part of its food. This bird of prey also pursues gulls and terns and eats the fish it forces them to disgorge. The male acquires under its bill a bright scarlet pouch which is capable of inflation.

## HOUSED IN OLD BUILDINGS

Financial Institutions of Yorktown, Virginia, Do Business Among Historic Surroundings.

Within 20 miles of where the first English settlement in America was made at Jamestown is the scene where Capt. John Smith records the story of his rescue by Pocahontas, the daughter of the Indian chief, Powhatan. Within a circle of 20 miles is to be found the oldest Protestant church in America; the kitchen where Martha Washington cooked in good colonial style; the college which has graduated three presidents; Bruton church, in which more men of historical importance have worshipped than in any other church in America—and Yorktown, where Cornwallis surrendered to Washington.

Although Yorktown has a population of less than two hundred, it has two banks, both of which are working in what are probably the two oldest buildings used for banks in America. One of these banks, operating under state and trust company laws, is housed in the historic oldest customhouse built in America—erected in 1715. Here the ships for Philadelphia were once compelled to enter and clear. Here at one time was the gathering place of the financiers of the early colonists. Wall street has taken away the financiers, but has left the same old building with its same old walls of English brick, some 24 by 40 feet square and two stories high.

## Panama Canal Locks.

There are few things more interesting to the average traveler than to pass through the great locks of the Panama canal. The vessel enters very slowly and as she does lines are taken aboard leading to electric motors or "mules," which keep her in the center of the lock. Then the great gates at the rear swing together and the water is turned into the enclosure thus formed. Looking over the side of the steamer one sees a great bubble of water rise from the bottom, then a second and third appear until finally the whole surface of the lock is boiling. The pressure is so great that often fish sucked into the drains that lead from the Gatun lake, are drawn in and thrown several feet into the air. When the proper level is finally reached the gate ahead of the vessel opens and the "mules" start forward, dragging the vessel free from the lock before she moves ahead under her own power.

## Carnival Festivities.

Carnival festivities originated in the Roman Catholic countries of Europe, where they were celebrated, especially in Rome and Naples, with great mirth and freedom during the week before the beginning of Lent. Mardi Gras (literally "Fat Tuesday," so called for the French practice of parading a fat ox, "boeuf gras," during the celebration of the day), or Shrove Tuesday, is the last day of the carnival. The festivities were first introduced into New Orleans in 1823, by one of its French citizens, Mr. Marigny, and for many years they consisted of promiscuous maskers roaming through the streets of the city, indulging in various kinds of amusements, fun and folly.

Oldest Crown Jewel a Sapphire. Only a few of the early British royal jewels survive in the present regalia. The oldest of these is the sapphire of Edward the Confessor, which was originally set in his coronation ring. It was buried with him in his shrine in Westminster Abbey, but in 1101 the shrine was broken open and this and other jewels removed. The sapphire is in the cross on the top of the king's state crown. Legend has it that St. John once appeared before the Confessor as a pilgrim, and that the monarch gave him the ring, which was returned later. The stone is reputed to have the power of curing scurvy and rheumatism, but has not been used for this purpose.
